

Seek and Sight - Game Concept Expansion: Techie Tim's World

Overview

Techie Tim's World is a futuristic learning space introducing children to basic coding logic through sight word play. With visual direction, drag-and-drop functionality, and interactive animations, this world enhances literacy, sequencing, and problem-solving.

Mini-Game 1: Robot Path Builder

Players drag sight word commands such as 'go', 'stop', 'jump', 'turn' to guide a robot through a digital maze or course.

Obstacles: Lava pits, water zones, cracked tiles that require specific commands to navigate.

Collectibles: Stars, toolboxes, or bonus tokens appear along the way to encourage exploration.

Hint Mode: Optional button that animates Tim giving a tip on the next best move.

Mini-Game 2: Command Debugger

Children are shown an incorrect command sequence (e.g., stop > jump > go) and must identify and fix the error by replacing or reordering the sight word commands. Reinforces logic and word understanding.

Mini-Game 3: Robot Builder Challenge

Each completed level unlocks a new robot part (e.g., arms, wheels, color skins). Children can customize their robot helper with the parts they've earned through accurate sight word sequencing.

Mini-Game 4: Action Word Arena

Fast-paced word game where commands appear quickly, and the child must tap the correct action before time runs out. Encourages quick sight word recognition and response under light pressure. Helps improve reflex and word recall.

Word Bank for Commands

go, stop, run, jump, back, turn, up, down, fast, slow, over, under, left, right, loop, next, fix, do, step, now

Seek and Sight - Game Concept Expansion: Techie Tim's World

Theme & Engagement Additions

- Levels can be set in digital cities like Circuit City, Algorithm Alley, or Loop Lake.
- Robot makes silly sounds when a wrong command is played (non-punitive).
- Players earn badges or mission tags like 'Code Captain', 'Fix-It Pro', 'Speed Scripter'.
